#### Travel report – ECI2015 Vienna

From September 6<sup>th</sup> until September 9<sup>th</sup> I attended the ECI congress of 2015, which was organized in Vienna. During this meeting where all immunology topics were covered, I was especially inspired by the presentations of Prof. Dr. Klaus Rajewski (BCR signaling and GC reactions), Prof. Dr. Jenny Ting (NLR family of innate immune sensors), and Prof. Dr. Luke O'Neill (inflammasome).

Because of the large variety in topics during parallel sessions, I mainly went to sessions about B cells and immune receptor signaling, which are related to my own research topic. In addition, I choose to follow sessions to broaden my knowledge about for instance mucosal immunology, innate like lymphocytes and immune therapy.

On Tuesday I was able to present my poster about "Dynamics in B cell subset and BCR repertoire distribution during human aging". This was a very interactive session, with good feedback and discussions.

Furthermore, this meeting gave me the opportunity to network with other immunologists, which might help me with choosing the next step in my career. I would like to thank the NVVI for supporting the possibility to attend this congress, it was much appreciated.
